

Maisto "Custom Shop Series"

Posted by Hippie - 03 Sep 2008 16:48

ya know how you come across things you just can't leave the store without? That happens to me every time I go into our local Dollar General store. I always head straight for the toy section! I've found some insanely cool stuff there over the years! Today was no different. i found a rack of 1/64 Maisto cars and I couldn't resist! Hey, they were 2 for \$3!!!! Anyway here's the first, a Mercedes SL 55 AMG.it's so cool I just had to have it!!!

Hey, looks like you do have the close up shots looking much better. Nice models but I am not into them much.

That's how i kinda dabble in diecast. if it catches my eye then I buy it! I lost a ton of Hot Wheels and others in that darned fire! And i'm still finding stuff almost 2 years later! And I STILL cruise the toy car section a Walmart when I'm shopping!! They are aweful darn hard to resist!! LOL!! One thing i noted about these is they are not riveted together, they have screws!!! Very interesting!

i would think that a machine would be easier on a toy if it was screwed together rather than riveted. Might be the reason. Could be done by automation too without harming the toy, I would think. The old way was done by hand by holding the model in a machine.
