

## VW Beetle - Top Up or Top Down???

Posted by RVREVO - 10 Feb 2009 04:41

---

Here's one of the few models that have survived a good twenty years or more.

Problem is, could never decide if the top was going to be up...

...or down

No matter how you look at it...

It looks really cool either way.

I tried to keep it real.

Also, if I remember rightly, I think all the last Beetle convertibles were LHD, even the ones they sold here.

Posted by RVREVO - 10 Feb 2009 15:23

2 / 4

Can't remember who the manufacturer was. It will take some time to dig it up.

Ah right, sorry, I thought the plate decal had come with the kit.

I *think* this is Revell (although I'm not sure!)

---

Could well be Revell. Very popular in the eighties. It would make sense 'cause I got the transporter only a few years before and repainted it with the same paint.

That would be this Transporter.

---

thanks, the beetle turned out the way I liked it with whatever I had available.

The T3 microbus was basically restored and rebuild.

This is one of three model kits I didn't stick to specs.
