

Which Solido is this?

Posted by RoutemasterNL - 05 Mar 2021 08:42

A fellow collector asked me which Solido this is. Can anyone help out? It looks a bit of a generic model to me.

It is from the late 30's period when Solido made generic vehicles but it did become model number 73 the 'Indoor Driving Saloon Car'.and despite what appear to be replacement rear wheels (possibly because the clockwork motor has been removed!) this is still very collectible.

Tristement, l'usine Solido d'Oulins (28) a fermé ses portes définitivement le 8 décembre dernier. La fabrication des moules et des miniatures a été entièrement transférée en Chine.

En 1929, Ferdinand de Vazailles dirigeant de la Fonderie de Précision de Nanterres produit un jouet promotionnel sous la forme d'une bougie d'allumage montée sur roues.

Cette miniature donne à Mr. de Vazailles l'idée de fabriquer des voitures miniatures en métal injecté sous pression ce qui est la spécialité de la Fonderie de Précision de Nanterres. Ces voitures produites à partir de 1932 le seront d'abord sous la marque Aluvac.

L'alliage utilisé est le zamac.
