---

Been kinda slow in M2 World. I posted these in finds, but I'll post them here, too.

The trucks look great. That '49 Merc is a bit much on the fancy paint but still a nice casting. I

guess the wheels are white plastic and not painted metal? I don't know much about the M2 cars and trucks and don't have any in my collection. In fact, last time I was at Wal-Mart and Toys R Us in Kelowna there were not to be found so I asked the clerk if they were just out of stock. He had no idea of what I was talking about. Never heard of them, he said. Same store at the second store, they did not know the models. So much for big box stores staying on top of sales.

The Merc is a chase piece, since traded. Yes, the wheels are white plastic. M2s are awesome, very detailed and well made. Since they are screwed together, you get some cars that are all messed up, but it's usually an easy fix. If not, M2 will supply the parts needed to repair it, or replace the whole car if not fixable.

I agree Jim the Merc is a bit garrish but it does come in far better versions

Ah Yes, I see now. NOT having them up here to look at when I do go to town makes it harder. Those are really nice. I would do the flame one over if I got one. Would look way better in Dark Purple.

Good looking Chevy. Has that Street Rod about it.
